

Case Study

Leading Chemical Manufacturing Company Revolutionizes Procurement Tracking Process for Streamlining Efficiency and Enhancing Accuracy

Introduction

Staying on top of orders and supplies is a make-or-break in the fast-paced chemical manufacturing industry. Even small inefficiencies can gum up the works. One of the renowned and leading chemical manufacturing company found this out the hard way when their engineering team started struggling with purchase tracking.

This case study delves into the challenges faced by the engineering department's procurement tracking process and the transformative solution provided by Titan Workspace.

Challenges Faced by the Chemical Manufacturing Company

Manual Email Process

The engineering department's purchase requisition process relied heavily on a manual email system. Small units within the department created individual Excel sheets listing the items for purchase requisitions, which were then emailed to the unit head daily.

Data Discrepancies

The manual nature of the process led to a significant challenge – the purchase requisition often got overlooked due to the multitude of emails. Items were picked from various Excel sheets, resulting in data discrepancies.

Solution Implemented by Titan Workspace

Common Library Creation

Titan Workspace introduced a revolutionary solution by creating a common library for each unit using the Group Library feature in a highly cost-effective manner and in a very short span of time. This library was seamlessly integrated within the company's Microsoft 365 subscription.

Centralized Updates

With the implementation of the common library, there was now a centralized hub for all purchase requisition updates. This eradicated the need for numerous emails and established a unified platform for tracking and managing procurement data.

Unit-Specific Visibility

The library was designed to be visible only to the designated unit or department within the company. This ensured that each department had its dedicated space for updates, streamlining the process and eliminating the risk of data being lost or overlooked.

Simplified Data Retrieval

The implementation allowed for easy retrieval of specific department data. This eliminated the cumbersome process of sifting through multiple emails and Excel sheets, significantly improving the efficiency of the procurement tracking process.

Business Benefits

✔ Efficiency Enhancement

The centralized library developed by Titan Workspace using the no/code approach drastically improved efficiency by providing a simplified single platform for updates. This let the client streamline procurement tracking without coding or technical support. Titan Workspace aims at simplifying SharePoint and delivering a user-friendly solution that reduced complexity and boosted productivity.

✔ Data Accuracy

By eliminating manual email processes and consolidating information in a common library, the company witnessed a significant improvement in data accuracy. This not only saved time but also ensured that procurement decisions were based on reliable information.

✔ Time and Resource Optimization

The document management system of Titan Workspace allowed for a more optimized use of time and resources. The simplified data retrieval process meant less time spent on searching through emails and Excel sheets, allowing employees to focus on more value-added tasks.

Titan Workspace's approach to procurement tracking has addressed the challenges the chemical manufacturing company faces. Implementing a common library within Microsoft 365 has provided a tailored solution that aligns seamlessly with the needs of the engineering department. Using the solution now each unit can easily make purchase requisition without any fail.

Leveraging a no/low code approach, Titan Workspace built an integrated system within Microsoft 365 for streamlined purchase requisitions. The new automated workflows enable engineering teams to easily submit orders through a centralized library custom-designed for their business units. By consolidating a previously fragmented process, we empowered users while increasing visibility across the procurement process. With deep Microsoft integration and custom-built automation, Titan Workspace delivered an innovative approach providing productivity gains quickly and cost-effectively. The procurement tracking solution tackles the clients immediate business needs while providing a flexible foundation for future growth.
